Experience

Handshake AI	Remote
AI Technical Trainer & Code Evaluator (Contract)	2025 – Present
- Evaluated AI-generated code snippets and system designs across Python, Java, and SQL for logical correctness, performance, and security edge cases. - Authored complex technical test prompts and benchmark suites to evaluate LLM reasoning capabilities and code output reliability.	
NexLevr	Remote
Software Engineering Intern	2024 – Present
- Maintained backend stability for the NexLevr platform while developing new features to enhance user engagement. - Contributed to full-stack web development and REST API integration across core platform services.	

Technical Skills

- Languages: Java, Python, SQL, JavaScript
- Frameworks & Libraries: Spring Boot, Spring Security, Hibernate, JPA, React.js, Node.js, Express.js, Flask, REST APIs, WebSockets
- Tools & Databases: Docker, MongoDB, MySQL, PostgreSQL, Git, GitHub, Linux (Fedora), Hugging Face, Postman, VS Code

Projects

LUXZERA — Intelligent Fashion Discovery Platform [GitHub]	Jan 2025 – Present
- Developed a fashion discovery web app within a two-engineer team, curating complete outfits tailored to a user's specific dimensions. - Designed transaction-safe API endpoints in Java and Spring Boot to manage live user preference states, secure account verification, and checkout data blocks. - Separated application logic into decoupled layers while tuning relational schemas via Hibernate to fix $N + 1$ query loops, reducing latency from 150ms to 60ms.	
QUANTUM-SECURE E-AUCTION SYSTEM (BB84 Protocol) [GitHub]	Jan 2025 – Present
- Architected a tamper-proof e-auction platform built with React (Vite), Tailwind CSS, Node.js, Express.js, WebSockets, and MongoDB. - Implemented BB84 Quantum Key Distribution (QKD) simulation to generate unique quantum keys, encrypting every bid payload for confidential transmission. - Integrated Quantum Bit Error Rate (QBER) monitoring logic to detect eavesdropping real-time, preventing bid interception and tampering.	
HYBRID BOOK RECOMMENDATION PLATFORM — Machine Learning Engine [Hugging Face]	May 2024 – June 2024
- Built an end-to-end data pipeline as Team Head, processing over 3 million data rows from the Amazon Book Reviews dataset alongside structured content arrays. - Engineered a hybrid retrieval flow combining TF-IDF textual features with a collaborative LightFM model using a sparse interaction matrix to resolve cold-start issues. - Tuned underlying WARP loss parameters to achieve a precision@5 score of 0.1688, deploying the final model publicly on Hugging Face for API utilization.	

Technical Achievements & Hackathons

- Amaravati Quantum Valley Hackathon — 2nd Prize: Served as Lead Frontend Developer for Team Ekalavya (Problem Statement AQVH911); built the real-time encryption interface for a Quantum-Secure E-Auction System.
- National AI Hackathon — 2nd Prize: Deployed interface layout components and state management routines for an automated evaluation system, debugging data tracking anomalies under high request volumes.

Education

B.Tech – Artificial Intelligence and Data Science	Expected 2027
SRKR Engineering College, Bhimavaram	
Relevant Coursework: Data Structures & Algorithms, Machine Learning, Big Data Algorithms, Database Management Systems
