Summary

Backend and Frontend Engineer experienced in building secure, scalable applications using Java, Spring Boot, Spring Security, REST APIs, MySQL, and PostgreSQL. Highly skilled in designing layered architectures, building robust frontend interfaces, and implementing secure authentication systems using JWT and OAuth 2.0. Solid foundation in Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, and Computer Networks, with a core focus on distributed systems design and engineering high-throughput backend services.

Education

B.Tech – Artificial Intelligence and Data Science

Expected 2027

SRKR Engineering College, Bhimavaram

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Big Data Algorithms, Database Management Systems, Object-Oriented Programming, Operating Systems, Computer Networks

Technical Skills

- **Programming Languages:** Java, Python, JavaScript, SQL
- **Frameworks & Libraries:** Spring Boot, Spring Security, Hibernate, JPA, React.js, Electron.js, Node.js, Express.js, Flask, REST APIs
- **Databases & Tools:** MySQL, PostgreSQL, Git, GitHub, Linux, Postman, IntelliJ IDEA, VS Code
- **Software Engineering:** Data Structures & Algorithms, Object-Oriented Programming, Design Patterns, Database Design, API Design, System Design Fundamentals

Projects

LUXZERA — Scalable Fashion E-Commerce Platform

Jan 2025 – Present

- Designing and implementing 15+ secure REST endpoints for e-commerce workflows using Java, Spring Boot, Spring Security, MySQL, JWT, and Google OAuth 2.0.
- Enforcing strict separation of concerns by architecting a production-ready layered system pattern (Controller, Service, Repository, DTO, and Entity).
- Developing secure business logic for core operational workflows including user authentication, real-time inventory tracking, and transactional order processing.
- Implementing fine-grained, role-based access control (RBAC) via Spring Security to safeguard admin and customer resources.
- Architecting relational schemas and mapping data entities via JPA/Hibernate criteria to eliminate $N + 1$ query bottlenecks, reducing database roundtrips by an estimated 60% during high-frequency read benchmarks.

QMail — Quantum-Secure Desktop Communication Platform

Jan 2025 – Present

- Developing a secure cross-platform desktop email client leveraging Electron.js for the interface alongside Node.js and Express.js backend services.
- Designing asynchronous RESTful APIs tailored for zero-trust message handling, user state preservation, and safe local data retrieval.
- Integrating IMAP and SMTP handling to manage secure, compliant end-to-end email transmission and protocol handshakes.
- Simulating classical Diffie-Hellman key exchanges and post-quantum cryptographic primitives using Qiskit, alongside AES-256 modular encryption layers to guarantee payload integrity.

CIVIC-APP — Distributed Civic Issue Resolution System

Jan 2025 – Present

- Architecting a distributed tracking and reporting ecosystem using machine learning to automate local civic grievance routing.
- Building modular processing pipelines that ingest multi-source user reporting structures, utilizing localized text classification models to accelerate category dispatch.
- Sharding transactional logs over relational database architectures using PostgreSQL to achieve partition-tolerant data collection during simulated peak report volumes.

Achievements

- **Amaravati Quantum Valley Hackathon — 3rd Prize:** Served as Lead Frontend Developer for Team Ekalavya, designing and developing a Quantum-Secure E-Auction System utilizing secure cryptographic verification pipelines.
- **National AI Hackathon — 2nd Prize:** Architected and deployed the core application interfaces for an automated AI Assessment Platform, processing high-frequency evaluation requests under tight competitive constraints.
